
$C = 2\pi r$

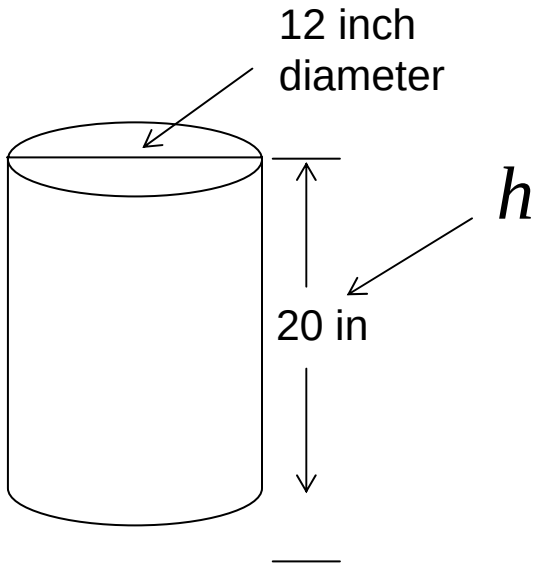
$C = 2\pi \left(\quad \right)$

$A = \pi r^2$

$A = \pi \left(\quad \right)^2$

The radius ‘r’ is half the diameter.

$r = \frac{1}{2} d$

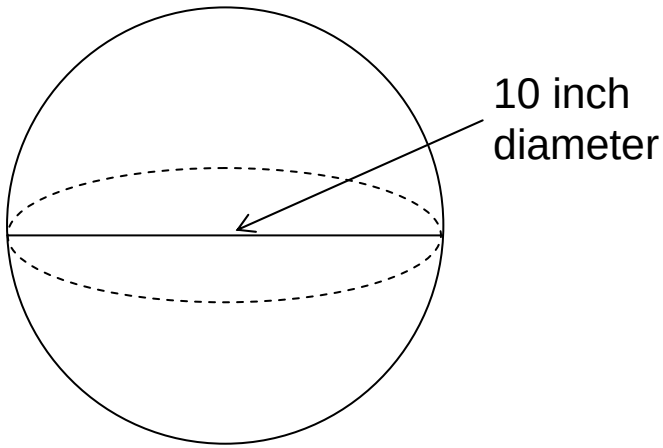


$$V = \pi r^2 h$$

$$V = \pi (\quad)^2 (\quad)$$

The radius ‘r’ is half the diameter.

$$r = \frac{1}{2} d$$



$$V = \frac{4}{3}\pi r^3$$

$$V = \frac{4}{3}\pi \left(\quad \right)^3$$

The radius ‘r’ is half the diameter.

$$r = \frac{1}{2}d$$
